Aspen, CO | Relocating to New York City, 2026.

Cell: (303)-214-8105 | noahkoury1@gmail.com | <https://www.linkedin.com/in/noah-koury/>

Summary

I am a Structural Designer (EIT) with 4+ years of experience designing and building complex, high-end residential structures. After gaining over a year of field experience, I transitioned back to design and have accrued 3+ years of experience under a licensed engineer and have passed the NCEES PE Civil: Structural exam. As a design engineer, I have developed proficiency in RAM, RISA 3D, EnerCalc and Revit modeling, and leverage that software suite to take projects from schematic design through construction administration. I prioritize high-quality coordination with architects, constructible details, and resolving field issues quickly on wood, steel, concrete, and composite framing systems. My portfolio of design projects and drawing sets is available upon request.

Certifications

Engineer-In-Training – Passed February 2023

NCEES administered Fundamentals of Engineering Exam.

PE Civil: Structural – Passed February 2025

3/4 Applicable years of experience under a licensed engineer completed.

Education

Colorado State University - Fort Collins, Colorado

Bachelor of Science in Civil Engineering – Graduated December 2021

Experience

Project Engineer (EIT)

DB Structural Design [February 2024 – Current]

Aspen, Colorado

- Designed structural systems using RAM (Structural System, S-Beam, Concept), RISA 3D, and EnerCalc for complex, high-end residential projects.
- Extensive drafting experience of BIM models and detail drawing in Revit 3D to facilitate coordination with architects and other subconsultants.
- Led Construction Administration for on-going projects, resolving field conflicts quickly through coordinated sketches, detail adjustments, and site collaboration with contractors.
- Continuing in-depth design experience through all project phases, utilizing multiple material types and applications. Steel to wood interaction, concrete composite members, moment frames, and more.

Client Coordinator (EIT)

York Engineering [January 2023 - February 2024]

Denver, Colorado

- In-depth design experience with light-frame timber, concrete, and steel residential construction.
- Project Management experience with proposal and contract creation, invoicing, & scheduling. Coordination with architects, clients, and subcontractors during design & construction.
- Site experience conducting foundation footing and wall inspections, as well as full framing observations including report write-ups and inspection package creation.

Superintendent

Virtus Construction & Design [April 2021 - January 2023]

Loveland, Colorado

- Managed construction schedules, subcontractor coordination, and material procurement for custom single-family luxury homes.
